Energy Efficiency

Helping Canberrans with little money to lower the cost of their energy bills

Our homes use energy! Turning on a light, the heater, the TV and even the stove uses energy. All this energy costs money.

We help to teach people how to reduce their energy. Reducing energy like electricity and gas saves our environment.

Did you know that in Canberra the most expensive energy using items in a home are heaters?

This helps people who have little money and helps the planet!
