The SA Tariff-Tracking Project: Purpose and outputs

This project has tracked electricity and gas tariffs in South Australia from July 2009 to July 2023 and developed a spreadsheet-based tool that allows consumer advocates to build on the initial analysis and continue to track changes as they occur. The first report for the SA Tariff-Tracking project was published in August 2012 and this up-date report focuses on price changes that have occurred over the last year.

We have developed workbooks that allow the user to enter consumption levels and analyse household bills for regulated/standard gas and electricity offers from July 2009 to July 2023, as well as published electricity and gas market offers from July 2012 to July 2023.¹ A more recent addition to the Tariff-Tracking project is market offers available to new solar customers. The workbook allows users to calculate annual bills based on retailers' rates, feed in tariffs offered and additional discounts. Again, the user can enter consumption level as well as choosing to run the bill calculation based on 1.5 kW or 3 kW solar systems.

Workbook 1: Electricity standing offers July 2009-July 2023 Workbook 2: Gas standing offers July 2009-July 2023 Workbook 3: Electricity market offers post July 2012-July 2023² Workbook 4: Gas market offers post July 2012-July 2023 Workbook 5: Solar market offers post July 2016-July 2023

The jurisdictional update reports will be followed by a NEM comparison report that discusses market issues and customer impacts in more detail as well as making recommendations.

All workbooks and reports can be accessed at the St Vincent de Paul Society's website: <u>www.vinnies.org.au/energy</u>

^{1.} All market offers are published offers and do not include special offers that retailers market through door-knocking campaigns or brokers. We use the retailers' own websites to collect market offer for the Tariff-Tracking tool. If the retailer has more than one market offer we use the offer that produces the lowest annual bill and/or the offer the retailer promotes as it's best offer.

^{2.} This workbook also contains electricity market offers that took effect upon the deregulation of the retail market in February 2013.

Key findings

In terms of general trends, the South Australian tariff analysis found that:³

- ▲ The Default Market Offer (DMO) electricity bill **increased by approximately 24%** for both single rate and controlled load on 1 July 2023. See charts 1 and 2 in section 1 below.⁴
- DMO customers with a typical consumption level (6,000kWh/annum) will have an annual electricity bill of approximately \$3,205.⁵
- ▲ For **gas**, Origin Energy's standard contract offers have **increased by 18%** since last year (July 2022). See chart 4 in section 1.
- ▲ Standard contract customers with a typical consumption level (21,000Mj/annum) will have an annual gas bill of approximately \$1,440.⁶ See chart 4 in section 1.
- The average annual bill for electricity market offer customers consuming 6,000kWh per annum is currently around \$2,925. That is \$280 more than last year, an increase of 11%.⁷ See section 2.1.
- The difference between the best and the worst electricity market offer is approximately \$1,220 per annum.⁸ The difference, or the price spread, is thus similar to last year when it was \$1,230. If we exclude the single worst and the single best market offer, however, the maximum price-spread is reduced to \$760. See chart 5 in section 2.1.
- For average consumption households (6,000kWh/annum for single rate), the worst electricity DMO/standard contract offer is \$905 per annum more than the best published market offer. Households currently on AGL's DMO can save \$770 if switching to the best market offer. See chart 6 in section 2.1.
- ▲ In regards to households with controlled off-peak load, typical consumption households (7,500kWh per annum) currently on AGL's DMO can save approximately \$810 per annum if switching to the best market offer.⁹ The difference between the best and the worst market offer is \$1,480 per annum for this meter type. See chart 7 in section 2.1.
- ▲ The **DMO off-peak rates for controlled load have increased significantly** while there has been a small increase to the controlled off-peak rates for the average market offer. The average DMO controlled off-peak rates are now similar to that of the average market offer.
- ▲ For gas, the average annual market offer bill for households consuming 21,000 Mj per annum is currently \$1,395. That is \$100 more than last year.¹⁰ See section 2.2.
- Typical consumption households (21,000Mj) can save \$220 per annum if switching from Origin's standard contract to the best market offer.¹¹ See chart 9 in section 2.2.
- Price changes to individual electricity and gas market offers vary significantly between retailers. See section 3.1.
- The price-spread between AGL's DMO and electricity market offer has increased slightly since 2022. AGL's market offer is currently \$230 less per annum than the regulated offer (6,000kWh/annum for single rate). For gas, the difference between Origin's standing and market offer is just \$65 per annum (21,000Mj).

^{3.} These calculations are based on changes to the DMO/standard contract offer for single rate electricity customers using 6,000kWh per annum, changes to the DMO/standard contract for controlled load electricity customers (typically all-electric households) using 7,500kWh per annum (thereof 20% off-peak) and changes to the standing offer for gas customers using 21,000Mj per annum.

^{4.} Based on AGL's DMO/standard contract offers.

^{5.} Based on average DMO offer across all retailers (single rate tariff).

^{6.} Based on average gas standing offer across all retailers.

^{7.} Households using 6,000kWh per annum (single rate) and all market offer bills include additional discounts and/or pay on time discounts.

^{8.} Ibid.

^{9.} Based on AGL's standard contract offer and the best of the published market offers (including pay on time discounts).

^{10.} Households using 21,000 Mj per annum and all market offer bills include additional discounts and/or pay on time discounts.

^{11.} Based on Origin's standard contract offer and the best of the published market offers (including pay on time discounts).

- ▲ The daily electricity and gas supply charges vary significantly between retailers as well as retail offers. The lowest market offer supply charge (including pay on time discounts) is approximately \$250 per annum less than the highest supply charge for electricity. For gas, the difference is \$190 per annum. See charts 14 and 15 in section 4.
- ▲ The electricity Network Use of System (NUOS) charges increased marginally in July 2023. However, as AGL's DMO offer increased significantly in of July 2023, the NUOS proportion of the standing offer bill has decreased and currently accounts for 31% of an average consumption customer's bill. The NUOS proportion of bills is now at its lowest since 2017. See chart 16 in section 5.
- ▲ The gas Distribution Use of System (DUOS) charges increased in July 2023. However, as the increase to Origin's standing offer price was greater than the increase to the DUOS, the DUOS proportion of gas bills is down compared to last year. The DUOS proportion of gas retail bills is currently 42%. See chart 17 in section 5.
- ▲ For solar customers, the average annual bill is approximately \$1,750 for households with 3 kW systems and \$2,095 for households with 1.5 kW systems installed.¹² This means that the average annual bill is \$1,185 less for solar households with 3 kW systems installed compared to non-solar households. See section 6.
- Compared to last year, the average market offer for solar customers with a 3kW system has increased by \$155 (or 10%) and for solar customers with a 1.5 kW system it has increased by \$205 (or 11%).¹³ See section 6.
- ▲ The average FIT rate (across all retailers) has been in decline since 2018. As of July 2023, however, the average FIT rate increased to 6.6 c/kWh (up from 5.2 c/kWh in 2022). See table 5 in section 6.

Adelaide households using 6,000kWh per annum (single rate) and all market offer bills include additional discounts and/or pay on time discounts.
 Ibid.

1. Energy price changes from July 2022 to July 2023

On 1 July 2019, the Australian Energy Regulator's (AER) new Default Market Offer (DMO) took effect in South Australia. The DMO has replaced the previously retailer-set standing offers. Importantly, the AER's DMO is expressed as an annual bill for a set consumption level and retailers are still able to "translate the annual amount into different tariff structures".¹⁴ The Regulations stipulate that retailers must structure their prices to not exceed the annual DMO price for that consumption level.¹⁵ In both July 2020 and July 2021, the price of the DMO decreased while it increased in July 2022 and July 2023.

The DMO prices for single rate and controlled load tariffs in South Australia are listed in table 1 below.¹⁶

SAPN						
\$2,279						
4,011 kWh/annum						
\$2,787						
6,017 kWh/annum						

TABLE 1 | Residential DMO prices in South Australia for 2023-24 (including GST)

^Approximately 30% of the annual consumption is allocated to the controlled load tariff.

As the Tariff-Tracking project aims to monitor and assess changes to energy prices over time, the remaining analysis presented in this report will be based on the consumption levels previous Tariff-Tracking reports have used for South Australia. That is 6,000 kWh per annum for single rate customers and 7,500 kWh per annum for households with controlled load.

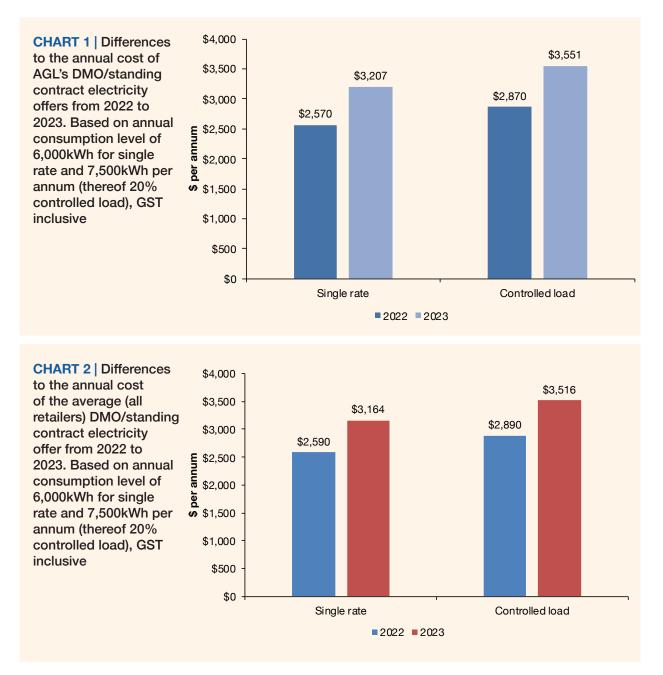

AGL's current DMOs are approximately 24% higher than they were last year (July 2022). AGL's current DMO produces annual bills of between \$3,205 and \$3,550 (depending on meter type) and that is an annual increase of around \$635 for single rate and \$680 for control load customers with these consumption levels. Chart 1 and 2 below show annual bills for average consumption households on AGL's DMO as of July 2022 and July 2023, as well as the average DMO (across all retailers) in the same years. This year, AGL's DMO, for these consumption levels, is somewhat higher than the average DMO (based on all retailers).¹⁷

^{14.} AER, Default Market Offer Prices 2020-21, Final Determination, April 2020, 9

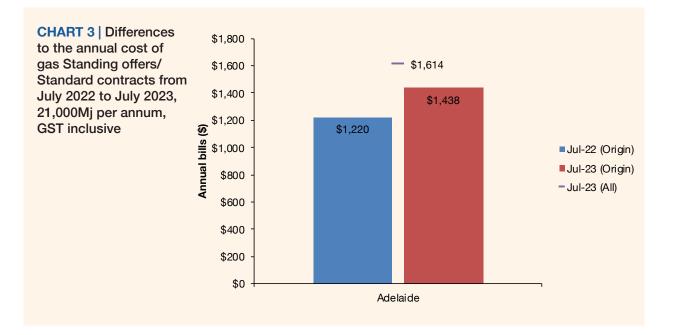

^{15.} Ibid., 9

^{16.} AER, Default Market Offer Prices 2023-24, Final Determination, May 2023

^{17.} As South Australia deregulated the retail market in February 2013 and AGL was required to offer a transitional standing offer for two years post deregulation, the majority of South Australian households currently on an electricity standing offer are therefore AGL customers. As of Quarter 3 in 2022/23, around 82% of all standard contract electricity customers in South Australia were AGL customers. See AER, data for the Retail energy market performance update for Quarter 3, 2022-23, Types of contracts Q3 2022/23, Indicators s2.1, s2.2 and s2.6.

In terms of gas, Origin's standing offer gas bills increased by 18% for households with an annual consumption of 21,000Mj in July 2023. Chart 3 below shows Origin Energy's annual bills for the average consumption household on the gas standing offer as of July 2022 and July 2023, as well as the average standing offer (across all retailers) in July 2023. It shows that the annul bill for Origin standing offer customers has increased by almost \$220 and that Origin's annual bill as of July 2023 is less than the average standing offer.

2. Market offers post July 2023

2.1 Electricity market offers post July 2023¹⁸

- The difference between the worst DMO/standard contract offer and the best market offer is \$905 per annum (households using 6,000kWh, single rate).¹⁹
- Customers on AGL's DMO for electricity can save \$770 if switching to the best market offer.²⁰
- The average annual bill for households consuming 6,000kWh per annum is currently around \$2,925. That is \$280 (11%) more than it was last year.²¹
- ▲ The difference between the best and the worst market offer is approximately \$1,220 per annum.²² The difference, or the price spread, is thus similar to last year when it was \$1,230.
- If we exclude the single worst and the single best market offer, however, the maximum pricespread is reduced to \$760. Chart 5 below shows the retail market offer price-spread for electricity retail offers.

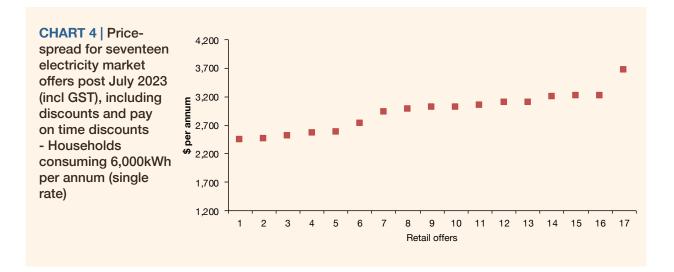

Table 2 below shows additional discounts applicable to the electricity retailers' published market offer rates. We note that the trend of fewer conditional pay on time discounts being offered and discounts being lower is continuing. Currently Diamond Energy and GloBird are the only retailers that offers a pay on time discount, and Simply Energy is the only retailer that offers a guaranteed discount.

Table 2 also shows other contract terms and features, such as late payment fees, associated with these market offers. Some of the retailers have multiple market offers and may offer higher (or lower) discounts than those listed here. However, if the discounts are higher, they are usually tied to other conditions such as payment by direct debit or e-billing.

^{18.} These market offers were collected from the retailers' websites or Energy Made Easy on 12 July 2023. It should be noted that retailers may change their rates at any time.

Based on the worst standing offer (single rate) and the best of the published market offers (including additional discounts and/or pay on time discounts).
 Based on AGL's standing offer (single rate) and the best of the published market offers (including additional discounts and/or pay on time

discounts).

^{21.} Households using 6,000kWh per annum (single rate) and all market offer bills include additional discounts and/or pay on time discounts.

^{22.} Ibid.

There are also some retailers (Energy Locals and Amber Electric and) that have offers that include a membership fee. When analysing offers that include a membership fee, we have added this amount to the fixed supply charge.

Retail product	Guaranteed discounts	Pay on time discounts	ETF*	LPF*	Shortened billing cycle^	Offer took effect
AGL Value Saver	No	No	No	\$12.00	No	10/7/23

TABLE 2 | Published electricity market offers taking effect after July 2023: Key additional features and contract conditions

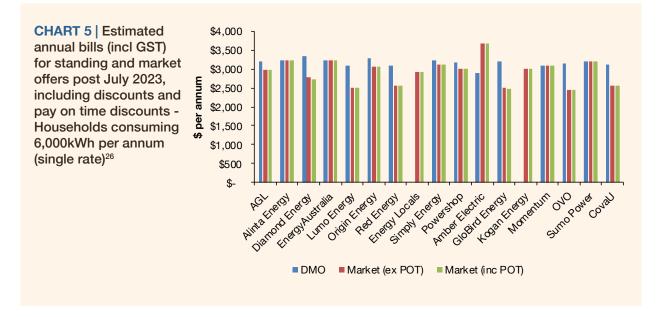

* ETF = Early Termination Fee and LPF = Late Payment Fee

Note that it is often unclear whether retailers actually apply a LPF as information on the retailers' website may be different to their Price and Product Information Statements

^ If yes, the offer has a mandatory shortened billing cycle (monthly billing) ^^ Fortnightly billing cycle

2.1.1 Potential savings - Differences between electricity offers

Households currently on AGL's DMO can save approximately \$770 if switching to the best market offer.²³ The difference between the worst standing offer (Diamond Energy) and the best market offer (OVO) is \$905 per annum.²⁴ Chart 5 below shows annual retail bills for typical consumption households (households using 6,000kWh). The blue columns to the left represent the DMO bill, the red columns are the market offers including guaranteed discounts (but not pay on time discounts) while the green columns are market offer bills including guaranteed and pay on time discounts.²⁵

The difference between the best and the worst market offer is more significant. OVO's offer is \$1,220 less than Amber Electric's market offer post discounts (and pay on time discounts) for households with this consumption level.²⁷ Compared to last year (July 2022), the average market offer (inclusive of additional discounts) has increased by around \$280 or 11%.

^{23.} Based on market offer bills that include discounts and pay on time discounts.

^{24.} Based on the worst standing offer (single rate) and the best of the published market offers (including additional discounts and/or pay on time discounts).

^{25.} These market offers were collected from the retailers' websites or Energy Made Easy on 12 July 2023. It should be noted that retailers may change their rates at any time. Discounts have been applied to consumption and/or total bill as per offers listed in table 2.

^{26.} Note that some retailers do not have a published DMO. Retailers' with DMOs only (i.e. no market offers) have been excluded from this analysis. 27. Amber Electric's market offer rates are based on charging customers the wholesale costs incurred by Amber and the published rates for this offer

^{27.} Amber Electric's market offer rates are based on charging customers the wholesale costs incurred by Amber and the published rates for this offer is therefore the maximum rate.

Figure 1 below shows estimated annual bills for market offers post discounts as well as how they ranked compared to other retailers.

FIGURE 1 | Lowest to highest annual bills (incl GST) for market offers post July 2023, including discounts and pay on time discounts - Households consuming 6,000kWh per annum (single rate)²⁸

•	OVO	2,439	EnergyLocals	Energy Locals	2,933	Simplyenergy	Simply Energy	3,103
GloBird	GloBird Energy	2,460	N agl	AGL	2,977	sumo	Sumo Power	3,196
	Lumo Energy	2,514	POWERSHOP	Powershop	3,005	EnergyAustralia	EnergyAustralia	3,217
red energy	Red Energy	2,568	kugan	Kogan Energy	3,005	alintaenergy	Alinta Energy	3,222
covau	CovaU	2,570	origin	Origin Energy	3,054	amber	Amber Electric	3,659
Diamond Energy-	Diamond Energy	2,729	momentum	Momentum	3,091			

Chart 6 below shows a similar trend for households with controlled load (using 7,500kWh per annum and thereof 20% controlled load).

The difference between the worst standing offer and the best market offer is around \$810 per annum (for households with controlled off-peak load using 7,500kWh per annum).²⁹ Households currently on AGL's standing offer can save \$810 if switching to the best market offer. The difference between the best and the worst market offer is approximately \$1,480 and OVO's offer produces the lowest bill while Amber Electric's rates produce the highest bill for households with controlled off-peak load.³⁰

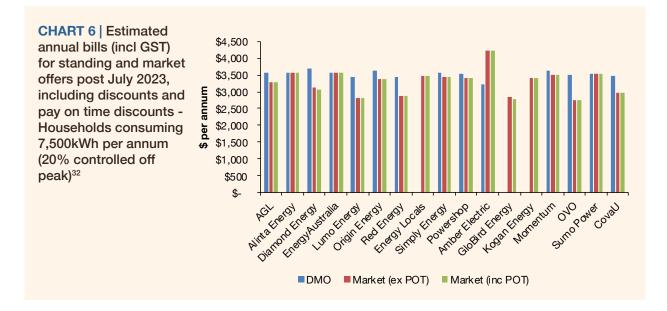

The blue columns to the left represent the standing offer bill, the red columns are the market offers including guaranteed discounts (but not pay on time discounts) while the green columns are market offer bills including pay on time discounts.³¹

^{28.} These market offers were collected from the retailers' websites or Energy Made Easy on 12 July 2023. It should be noted that retailers may change their rates at any time. Additional discounts for customers choosing to pay by direct debit are not included in these bill calculations.

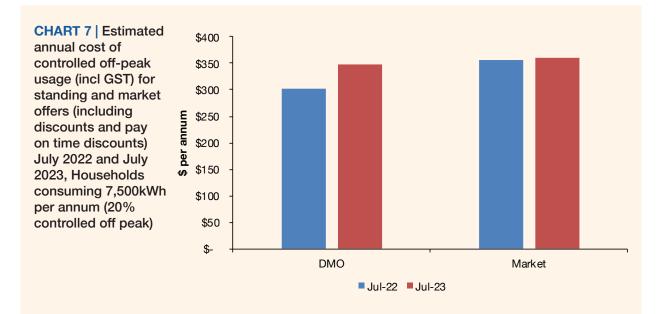

^{29.} Based on market offer bills that include discounts and pay on time discounts.

^{30.} Amber Electric's market offer rates are based on charging customers the wholesale costs incurred by Amber and the published rates for this offer is therefore the maximum rate.

^{31.} These market offers were collected from the retailers' websites on 12 July 2023. Discounts have been applied to consumption and/or total bill as per offers listed in table 3.

The DMO off-peak rates for controlled load have increased significantly. Chart 7 shows annual controlled load costs for the average DMO offer as well as the average market offer in July 2022 and July 2023. It shows that there has been a small increase to the controlled off-peak rates for the average market offer and that the average DMO controlled off-peak rates are now similar to that of the average market offer.

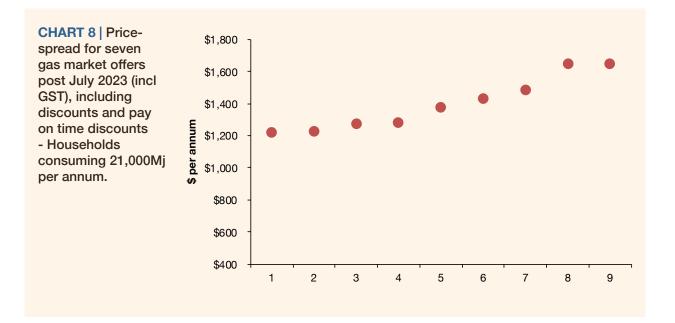

^{32.} Note that some retailers do not have a published DMO. Retailers' with DMOs only (i.e. no market offers) have been excluded from this analysis.

2.2 Gas market offers post July 2023³³

There are very few gas market offers in South Australia and the only area where there is more than one market offer is greater Adelaide (households in the other areas only have access to Origin's market offer). As such, the below analysis only comprises standard contracts vs. market offers in the greater Adelaide area.

- The average annual bill for households consuming 21,000 Mj per annum is currently \$1,395. That is \$100 more than it was last year.³⁴
- The difference between the best and the worst gas market offer is \$420 per annum (compared to \$530 last year). See chart 8 below.
- ▲ Typical consumption households (21,000 Mj) can save \$220 per annum if switching from Origin's standing offer to the best market offer.³⁵ See chart 9 below.

The discounts (including pay on time discounts) used to estimate the annual bills are shown in table 3 below. As is the case for electricity, gas market offers contain fewer discounts as well as other conditions compared to previously. Table 3 also shows other contract terms and features associated with these market offers.

^{33.} These market offers were collected on 12 July 2023 and it should be noted that retailers may change their rates at any time.

^{34.} Households using 21,000 Mj per annum and all market offer bills include additional discounts and/or pay on time discounts.

^{35.} Based on the regulated offer and the best of the published market offers (including pay on time discounts).

TABLE 3 | Published gas market offers in the Adelaide gas zone post July 2023: Key additional features and contract conditions

Retail product	Guaranteed discount	Pay on time discounts	ETF^	LPF^	Offer took effect
AGL Value Saver	No	No	No	\$12.00	4/7/23
Energy Australia Flexi Plan	4% off bill	No	No	\$12.00	1/7/23
Origin Go Variable	No	No	No	\$12.00	1/7/23
Simply Energy Saver	4% off bill	No	No	\$12.00	1/7/23
Red Energy Living Energy Saver	No	No	No	No	1/7/23
Lumo Energy Plus	No	No	No	No	1/7/23
GloBird Energy Boost	No	No	No	No	5/7/23
Alinta Energy HomeDeal	No	No	No	No	1/7/23
CovaU Freedom	No	No	No	No	12/4/23

^ *ETF* = *Early Termination Fee and LPF* = *Late Payment Fee*

Note that it is often unclear whether retailers actually apply a LPF as information on the retailers' website may be different to their Price and Product Information Statements

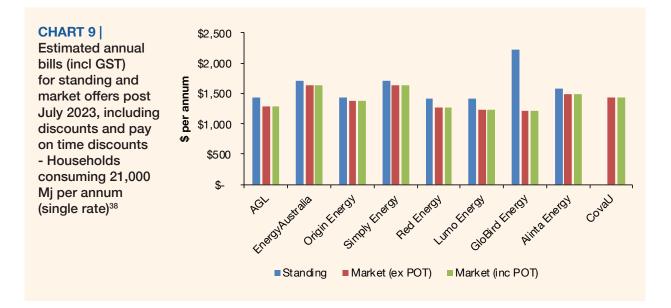

2.2.1 Potential savings - Differences between gas offers

Chart 9 below shows annual retail bills for typical consumption (21,000Mj per annum). The blue columns to the left represent the standing offer bill, the red columns are the market offers including guaranteed discounts (but not pay on time discounts) while the green columns are market offer bills including guaranteed and pay on time discounts.³⁶

It shows that typical consumption households (21,000Mj per annum) on the worst standing offer can save \$1,000 per annum if switching to the best published market offer.³⁷ GloBird Energy is currently the retailer with the best gas market offer as well as the worst standing offer.

^{36.} These market offers were collected on 12 July 2023 and it should be noted that retailers may change their rates at any time. Discounts have been applied to consumption and/or total bill as per offers listed in table 3.

^{37.} Based on market offer bills that include discounts and pay on time discounts.

The difference between the best and the worst gas market offers is less significant. GloBird Energy's market offer is approximately \$420 less than Simply Energy's market offer (post discounts) for households with this consumption level. Figure 2 below shows estimated annual bills for gas market offers post discounts ranked from the lowest annual bill to the highest.

FIGURE 2 | Lowest to highest annual bills (incl GST) for gas market offers post July 2023, including discounts and pay on time discounts - Households consuming 21,000Mj per annum³⁹

GioBirg	GloBird Energy	\$1,219
	Lumo Energy	\$1,226
red 💥	Red Energy	\$1,269
∖ ‰ agl	AGL	\$1,283
origin	Origin Energy	\$1,373
covau	CovaU	\$1,433
alintaenergy	Alinta Energy	\$1,482
C EnergyAustralia	EnergyAustralia	\$1,639
Simply energy	Simply Energy	\$1,641

^{38.} Retailers without market offers have been excluded from this analysis.

^{39.} These market offers were collected on 12 July 2023 and it should be noted that retailers may change their rates at any time. Additional discounts for customers choosing to pay by direct debit are not included in these bill calculations.

3. Retail market developments

This section reviews and analyses developments in the retail market, specifically changes to individual market offers and the price-spread between standing and market offers.

3.1 Changes to market offers July 2022 to July 2023

Chart 10 below shows changes to individual retailers' market offers from July 2022 to July 2023. It highlights that all electricity retailers except for Lumo Energy changed their market offers between July 2022 and July 2023.⁴⁰ Furthermore, it shows that there are significant differences between retailers. GloBird, for example have decreased their offer by more than \$1,000 per annum (after significant increases in July 2022), Alinta Energy's offer has increased by \$700, while Diamond Energy and Red Energy have made more restrained increases.

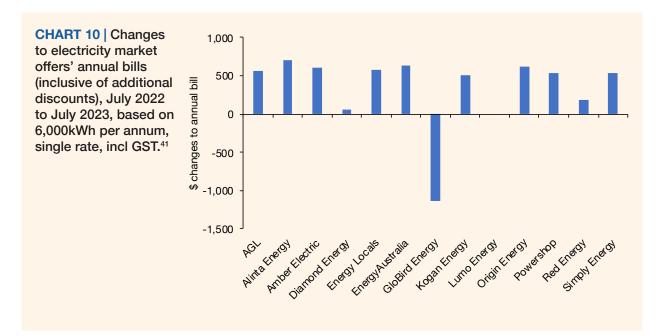

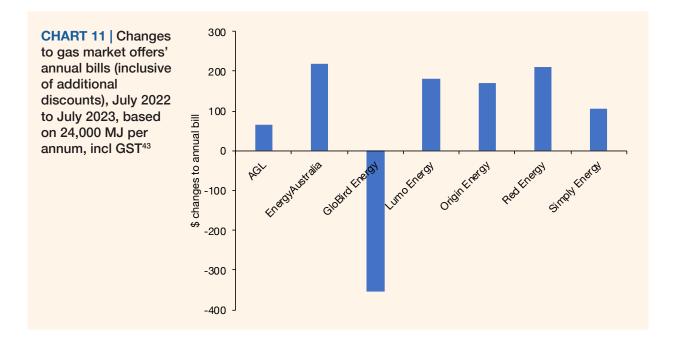

Chart 11 below shows that all gas retailers, except GloBird Energy, increased their market offers between July 2022 and July 2023.⁴² It also shows that Energy Australia's increase is the greatest.

^{40.} Note that this analysis only includes retailers that had published market offers in July 2022 as well as July 2023.

^{41.} As retailers may discontinue offers and/or introduced new market offers, this analysis is based on market offers deemed best value as well as "standard" (e.g. no direct debit requirements etc.) in both July 2022 and July 2023. Where this has occurred, the offers used for this comparison (2022/2023) are: Simply Energy (RAA/Saver).

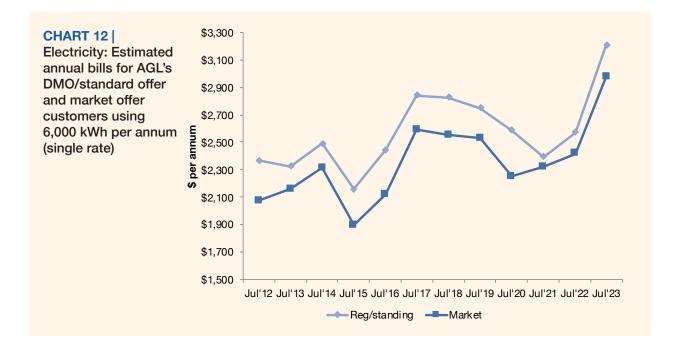

^{42.} Note that this analysis only includes retailers that had published market offers in July 2022 as well as July 2023.

3.2 The price spread

This section analyses the price difference between electricity (AGL) and gas (Origin) standing offers and market offers over time.

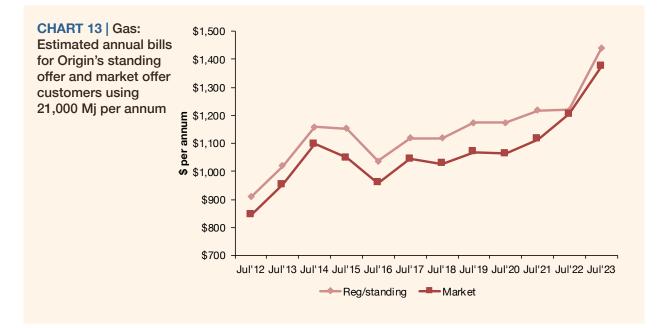

Chart 12 below shows the difference to annual bills for typical consumption households on AGL's standing offer and market offer from July 2012 to July 2023.⁴⁴ It shows that AGL's market offer is currently \$230 less than the regulated offer, and that there is a slight increase in the price spread.

^{43.} As retailers may discontinue offers and/or introduced new market offers, this analysis is based on market offers deemed best value as well as "standard" (e.g. no direct debit requirements etc.) in both July 2022 and July 2023. Where this has occurred, the offers used for this comparison (2022/2023) are: Simply Energy (Basic/Saver).

^{44.} Based on households consuming 6,000 kWh per annum. The July 2012 standing offer is the regulated rate.

Chart 13 below shows that for gas, the difference between the annual bill for customers on Origin's standing offer and Origin's market offer remains low at \$65.

4. Supply Charges

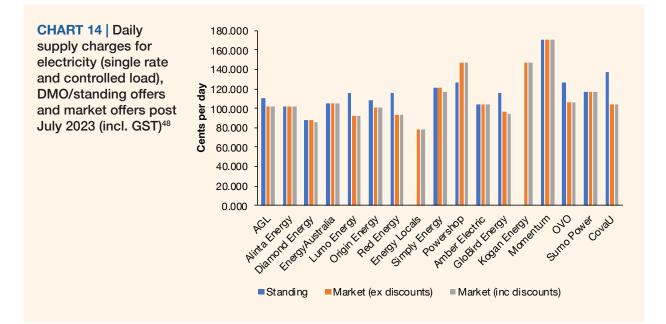

The supply charge is a fixed daily charge that is paid in addition to the consumption charges for electricity/gas used. High supply charges result in low consumption households paying a proportionally higher cost per unit of energy than high consumption households. This has significant equity implications as some customer classes characterised by low and fixed income also use less electricity than the South Australian average. Pensioners make up one of these lower consumption groups.⁴⁵

4.1 Electricity supply charges

Consumers shopping around for a better market offer should thus be aware that some retail offers have significantly higher supply charges than other retailers and/or contract types.

Chart 14 below shows the daily supply charges (cents per day) for the various offers available post July 2023. The blue columns to the left represent the supply charge for standing offers, the orange columns are the market offers excluding discounts while the yellow columns are market offer bills including discounts.⁴⁶

It shows that all nine retailers apply higher supply charges to their standing offers than they do to market offers. Powershop is the only retailer that applies a higher supply charge to its market offer than its standing offer. The increasing trend to offer only small discounts, or none at all, means discounting now has a minimal impact on supply charges compared to previous years. For market offers, inclusive of discounts, the difference between the highest supply charge (Powershop) and the lowest (Energy Locals) is around \$250 per annum.⁴⁷

^{45.} ABS survey data shows that households with government pensions and allowances as their main source of income have a mean weekly electricity consumption of approximately 122kWh and that households with wages and salaries as their main income source use approximately 20kWh more per week (142kWh/week). See ABS, 4670.0 Household Energy Consumption Survey 2012, Table 8, September 2013. Furthermore, Victorian consumption surveys have found that concession card holders in general, and households on the aged concession in particular, have lower consumption than the general population. See Victorian Utility Consumption Household Survey 2007 by Roy Morgan Research for Dept. of Human Services, Final report, April 2008, p 75. The lower consumption levels among aged concession card holders relates to the average size of these households. Pensioners, as a customer group, are on average smaller households (fewer people) compared to the population on a whole and this has an impact on their consumption levels.

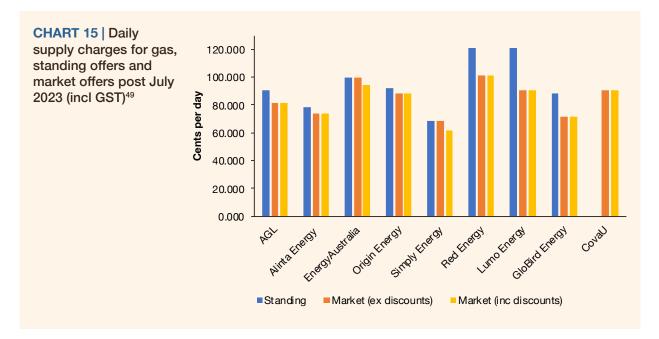

^{46.} Not all retailers have DMO/standing offers listed on their websites. These market offers were collected on 12 July 2023 and it should be noted that retailers may change their rates at any time. Discounts have been applied to consumption and/or total bill as per offers listed in table 3.

^{47.} Note that Energy Locals offer does include a membership fee in addition to the supply charge. This membership fee has not been included in this analysis.

^{48.} Retailers with standing offers but no market offers have been excluded from this analysis. Standing offer calculations do not incorporate membership fees associated with any of these offers.

4.2 Gas supply charges

Chart 15 shows that both Red Energy's and Lumo Energy's standing offer supply charge is 121 cents per day, which means that customers would pay approximately \$190 more per annum in fixed supply charge on this offer compared to Simply's standing offer (which is just under 69 cents/day). In terms of market offers, the difference between the highest supply charge (Red Energy) and the lowest (Simply Energy) is approximately \$145 per annum. As with electricity, discounting has minimal impact on gas supply charges this year with only two retailers offering discounts (Energy Australia and Simply Energy).

^{49.} Retailers without market offers have been excluded from this analysis.

5. Network charges

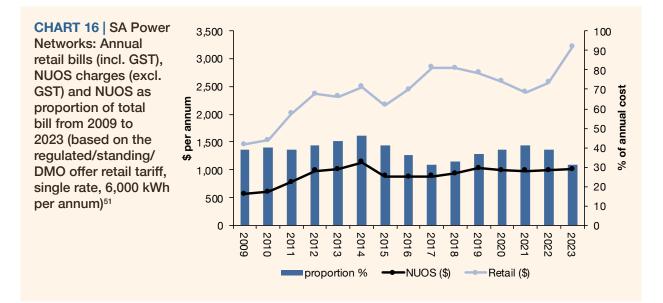

This section examines changes to electricity network charges since 2009 and gas distribution charges since 2019.

5.1 Electricity network charges

The South Australian electricity network, SA Power Networks, introduces new Network Use of System (NUOS) charges as of 1 July every year.⁵⁰ These NUOS charges are approved by the Australian Energy Regulator (AER) and comprise Transmission Use of System (TUOS) and Distribution Use of System (DUOS) as well as other costs such as jurisdictional charges and metering charges. The retailers can, and generally will, build changes to the NUOS (in relation to both shape and price) into their retail tariffs.

Chart 16 shows that the NUOS charge increased every year from 2009 to 2014 before significantly reducing in July 2015 and continuing to decrease until 2017. It increased again in 2018 and 2019, but in 2020 and 2021, the NUOS charge decreased. In 2022 the NUOS charge increased, albeit marginally. However, as AGL's DMO offer increased significantly in of July 2023, the NUOS proportion of the standing offer bill has decreased and currently accounts for 31% of an average consumption customer's bill. The NUOS proportion of bills is now at its lowest since 2017.

Chart 16 shows annual retail bills (solid line), NUOS charges as annual cost (dotted line) and NUOS as proportion of annual bill (columns).

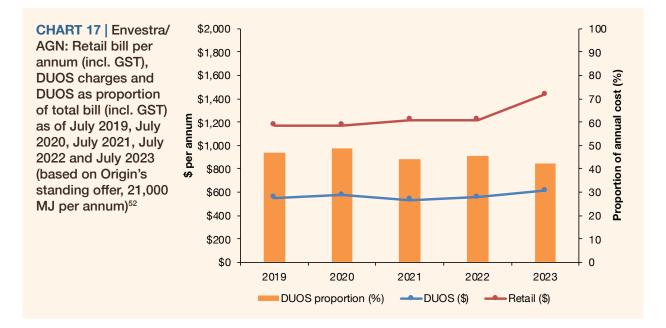

^{50.} SA Power networks was previously known as ETSA Utilities

^{51.} Based on AGL's regulated/standing offer/DMO rates from 2009 to 2023, presented as annual bills for households using 6,000kWh per annum (single rate). The annual NUOS charges have been calculated by allocating 1,500kWh per quarter (again based on annual consumption of 6,000kWh) to the step charges stipulated in the NUOS. The annual NUOS cost also includes fixed charges.

5.2 Gas network charges

As for electricity, the South Australian gas distributor, Envestra/AGN, introduces new Distribution Use of System (DUOS) charges as of 1 July every year. Chart 17 below shows that the DUOS charges increased in July 2023. However, as the increase to Origin's standing offer price was greater than the increase to the DUOS, the DUOS proportion of gas bills is down compared to last year. The DUOS proportion of gas retail bills is currently 42%.

^{52.} Based Origin's standing offer as of July 2019, 2020, 2021, 2022 and 2023. Presented as annual bills for households using 21,000 MJ per annum. The annual DUOS charges have been calculated by allocating 5,250 MJ per quarter (again based on annual consumption of 21,000 MJ) to the step charges stipulated in the DUOS. The annual DUOS cost also includes fixed charges.

6. Solar Offers

There are approximately 341,000 small to medium scale solar systems in South Australia.⁵³ Some of these households are currently receiving a solar feed in rate (FIT) of 44 cents per exported kWh but as these schemes are closed to new entrants, customers currently looking for solar offers need to assess both the retailers' FIT rates as well as the cost of electricity imported.

This section analyses and compares market offer bills for South Australian customers with 1.5 kW and 3 kW systems installed.⁵⁴ As retailers are not required to publish rates for solar products purchased and installed through them, this analysis only examines electricity offers available to customers independently of solar panels and installation.

Methodology and assumptions

To calculate the annual bills for the various solar market offers the following assumptions and methodology have been applied:

- An annual household consumption of 6,000kWh (including both produced and imported).
- For customers with controlled load, 20% of the total consumption has been allocated to the off-peak rate.
- Calculations have been produced for households with 1.5 kW and 3 kW systems only.
- ▲ For Adelaide households, an annual generation capacity per kW installed of 1.680 MWh and an export rate of 51.8% for 3 kW systems and 22.1% for 1.5 kW systems.
- ▲ For non-metropolitan households, an annual generation capacity per kW installed of 1.875 MWh and an export rate of 56.8% for 3 kW systems and 20.2% for 1.5 kW systems.
- Only FIT rates available to new customers have been included. Retailer funded FIT rates have been applied as per offer (see table 5 below).
- A flat annual consumption has been assumed.
- The annual bills have been based on quarterly bill calculations and all step increases have been applied as quarterly thresholds (including when the retail offer refers to daily or monthly thresholds). Daily fixed charges have been multiplied by 91 to calculate the quarterly amount.

The average FIT rate (across all retailers) has been in decline since 2018. In July 2018 it was 14.3 c/kWh, in 2019 it was 13 c/kWh, in 2020 it was 10.6 c/kWh, in 2021 it was 8.5 c/kWh and in July 2022 it was 5.2 c/kWh. As of July 2023, however, the average FIT rate increased to 6.6 c/kWh. Furthermore, some retailers (AGL, Origin Energy, Energy Australia and Energy Locals) offer a higher FIT rate for a set amount of kWh exported each day and a lower FIT rate for export beyond that. FIT rates continue to vary significantly among those retailers who do offer them. For example, a household exporting 650 kWh per quarter would receive a quarterly FIT credit of \$392 from Energy Australia but just \$26 from GloBird Energy.

^{53.} Small scale is defined as systems up to 100 kW. Clean Energy Council, Clean Energy Australia Report 2022, 76

^{54.} We note that these systems are small compared to the size of the typical systems that are currently being installed. However, as a key objective of the Tariff-Tracker is to compare developments over time, we continue to base the analysis on 3 kW and 1.5 kW systems.

TABLE 4 | Retailers' FIT rates July 2023

Retailer*	Offer	1st FIT rate (c/kWh)	Threshold (kWh/day)	2nd FIT rate (c/kWh)
EnergyAustralia	Solar Max	15	15	8.5
OVO	Solar Plan	14		
Origin Energy	Solar Boost	12	14	6
AGL	Solar Savers	10	14	6
Energy Locals	Online Member	9.5	10	6.5
Alinta Energy	Home Deal	8		
Simply Energy	Solar	8		
CovaU	Freedom	5.5		
Diamond Energy	Renewable Saver	5.2		
Powershop	Carbon neutral	5		
Kogan Energy	Free Kogan First Membership	5		
Sumo Power	Lite	5		
Momentum	Suit Yourself	3.5		
Lumo Energy	Plus	3		
Red Energy	Living Energy Saver	3		
GloBird Energy	GloSave	1		
Amber Electric	Amber Plan	0		

Chart 18 below compares annual retail bills for solar customers in Adelaide with 3 kW and 1.5 kW systems installed.⁵⁵ It shows that Amber Electric, AGL, Alinta, Powershop, Kogan, Momentum and Sumo's offers produce annual bills above the average for both 3 kW and 1.5 kW systems. Adelaide solar customers with 3 kW systems (and this consumption level) would be approximately \$1025 per annum better off on Diamond Energy's offer compared to Amber Electric's offer.⁵⁶ Customers with a 1.5 kW system installed may save \$1,000 per annum if they switched from Amber Electric's to Diamond Energy's offer.⁵⁷

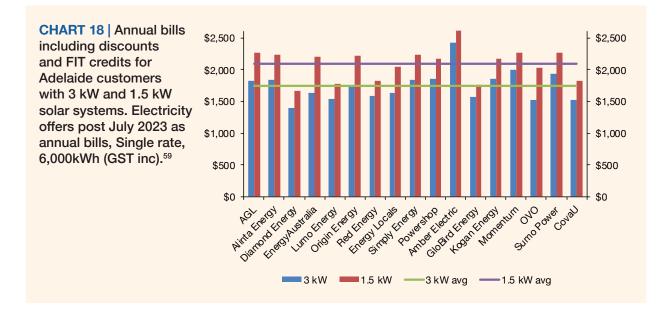

The average annual bill is approximately \$1,750 for households with 3 kW systems and \$2,095 for households with 1.5 kW systems installed. This means that the average annual bill is \$1,185 less for solar households with 3 kW systems installed compared to non-solar households (see section 2.1 above). Compared to last year, the average market offer for solar customers with a 3kW system has increased by \$155 (or 10%) and for solar customers with a 1.5 kW system it has increased by \$205 (or 11%).⁵⁸

^{55.} We note that these systems are small compared to the size of the typical systems that are currently being installed. However, as a key objective of the Tariff-Tracker is to compare developments over time, we continue to base the analysis on 3 kW and 1.5 kW systems.

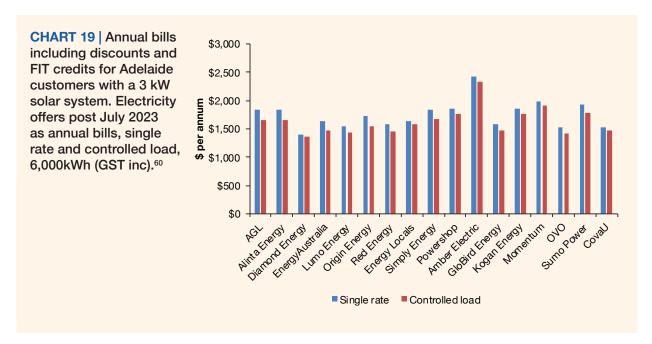

^{56.} Amber Electric's market offer rates are based on charging customers the wholesale costs incurred by Amber and the published rates for this offer is therefore the maximum rate.

^{57.} Ibid.

^{58.} The average annual market offer bill for non-solar households, by comparison, has increased by \$280 (or 11%) since last year. See section 2.1.

Charts 19 and 20 below show annual bills for Adelaide solar customers on single rate and controlled load offers.

^{59.} Calculations include discounts off usage or bill as well as pay on time discounts off usage or bill.

^{60.} Ibid.

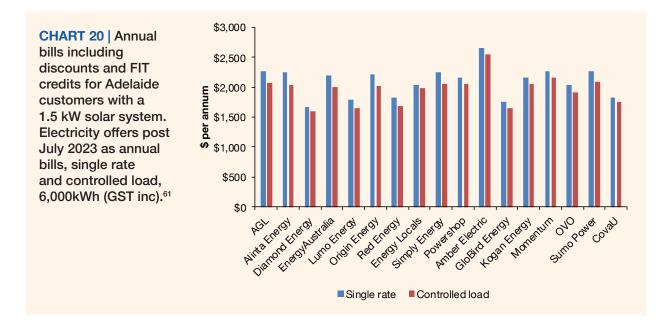

Figure 3 below shows estimated annual bills for solar market offers including FIT and discounts.

FIGURE 3 | Lowest to highest annual bills (incl GST) for solar market offers post July 2023, including discounts and pay on time discounts – Adelaide households with 3kW systems installed and consuming 6,000kWh annum (including both produced and imported), single rate⁶²

Diamond Energy-	Diamond Energy	\$1,400	EnergyLocals	Energy Locals	\$1,628	POWERSHOP	Powershop	\$1,861
covau	CovaU	\$1,524	EnergyAustralia	EnergyAustralia	\$1,638	kugan	Kogan Energy	\$1,861
•	OVO	\$1,527	origin	Origin Energy	\$1,725	sumo	Sumo Power	\$1,931
	Lumo Energy	\$1,546	N agl	AGL	\$1,828	momentum	Momentum	\$1,991
GloBird	GloBird Energy	\$1,575	alintaenergy	Alinta Energy	\$1,838	amber	Amber Electric	\$2,424
red y	Red Energy	\$1,580	Simply energy	Simply Energy	\$1,845			

Homes outside Adelaide's metropolitan area will typically have less overshadowing and therefore a higher generation capacity and export rate. Chart 21 compares annual retail bills for solar customers outside Adelaide with 3 kW and 1.5 kW systems installed. It shows that the annual bills for solar customers are marginally lower in non-metropolitan areas and that the price-spread is similar to that in metropolitan areas (see chart 18 above).

61. Ibid.

^{62.} These market offers were collected on 12 July 2023 and it should be noted that retailers may change their rates at any time. Additional discounts for customers choosing to pay by direct debit are not included in these bill calculations.

CHART 21 | Annual bills including discounts and FIT credits for regional and rural customers with 3 kW and 1.5 kW solar systems. Electricity offers post July 2023 as annual bills, single rate, 6,000kWh (GST inc).⁶³

^{63.} Calculations include discounts off usage or bill as well as pay on time discounts off usage or bill.
